

Definition of Developing Countries

Frontrunn3rs – <http://fr3.frontrunners.dk>

Definition of Developing Countries, before I get on with the definition of developing countries, I would like to show you some pictures. These pictures shocked us, Frontrunners so therefore if you are easily affected then I warn you that some of these pictures are not nice.

The developing countries have lower status than the other countries, why and how is this? How come the developed countries are ok? So Colin Allen gave us to discuss these reasons in groups, you can see the reasons that we all came up with.

Now you have seen the list of reasons, we FR3 collected these answers, example, decolonisation, colonisation, political, historical, economy, harsh climate, and outbreak of diseases and many more. How are we able to classify these countries to be developing or developed? We follow the economic status of World Bank, so see this picture.

On this map, as you can see that there are three different colours, which are green, yellow and red. The countries with the colour of green are high development meaning economic wise are high. Yellow countries are middle development and red are low development and they both are harder economic situation. The two colours of yellow and red are classified as developing countries. You can see that majority of the world are covered with both yellow and red, meaning that higher percentage of the world are developing countries.

Everyday

You all in developed countries have access to plenty amount and variety of food and drinks in your fridge whenever you want. But out in the world- 25,000 people die of starvation, Think!

You all have good, enjoyable life, visiting friends. But now there are wars happening, people are living in their lives with fear of being shot to death. Right now in every single day 1,000 people die of result of wars.

Every Year

We live our life with freedom to roam and wander, to run wherever we want to go, to relax and chill without any problems. But in many countries there are thousands of hidden landmines, so 15,000 to 20,000 people die every year from unanticipated stepping on the landmines, being blown up to death.

Of course if we feel ill or sick, we would go to the hospital where we would receive good services and clean beds, rooms and with pleasant nurse to take care, and leave the hospital by the next day.

In these developing countries, the hospital is not the same, run down, filthy; also three fully grown adults are squeezed together to share one typical sized hospital bed. In fact many thousands of people don't have access to hospitals or not able to get to the hospitals. So overall two million people die from lack of service and or access per year.

Right Now

You, me, we right now, can go and pour ourselves glasses of water from a tap, sometimes leave it running. In the evening filling up a bath up to brim with water. BUT one billion people worldwide have the same luxury and access to water as you? Well, see this picture...

Seen the dirty water pictures, are you able to drink them, there then, you say 'No', 'impossible' but right now there are people drinking these filthy water as they have no other options, right now, now.

You all at home, watching TV, eating good food, relaxing, with warm house. A big or small house don't matter, again BUT 35 million people, men, women and children in the whole world are homeless, living out in the cold and rain without any shelter. How are can they live?

As you know that the lives of Deaf people are harder than hearing people in Developed countries, Deaf people are regarded as second best to the hearing people.

So as you have seen from watching the video that the lives of hearing people in Developing countries are harder than in the developed countries. BUT what about the lives of the Deaf people in developing countries, much worsen.
