

Workshop around film and editing

Frontrunn3rs – <http://fr3.frontrunners.dk>

In the first week we learned how to work with a camera. There are three important ways. At first we practiced how to work with the lights and the background. We had to learn about the light effects. Then we exercised with the apparatus of camera how we can use the different buttons of the apparatus. We also learned about the working with zoom. These two ways we used in the third way. We studied to work with the program of the computer: editing. These ways we learned all for giving all information on the homepage during eight months. Do you want to see what we did? Let's open the door!
